

CONCAVE AND BOWTIE ROLLER QUOTATION WORKSHEET

Company: _____ Date: _____
 Contact: _____ Quote Due: _____ Desired Delivery: _____
 Phone No.: _____ Contact Email: _____ State: _____
 Omni Sales Contact: _____ Quote #: _____
 Quantity: _____ Type of Bearing: _____
 Between Frame Width (BF): _____ Pin Retained: _____
 Overall Cone (OAC) (if roller is not in frame): _____ Spring Retained: _____
 Axle Size: _____ (Hex or Round) Sprocket Size: _____ (if applicable)
 Axle Length: _____ (or Standard) Load Capacity Required: _____

Note: Between Frame (BF) is the distance between the frames of the conveyor. The BF measurement is needed to ensure proper fit into the conveyor. The BF dimension allows 1/16" clearance between the extension on the bearing and the side frame at each end. If the roller is not in the conveyor provide the Overall Cone, the length of the roller from bearing tip to bearing tip (See our Roller Measurement Guide for more information). Utilize the drawings below to depict more detailed specifications.

CONCAVE

Note: Typically the concave design is used when products being conveyed will have a consistent radius. The radius of the concave should match the product, or be slightly larger. Bowtie rollers should be used when the product size will vary.
